## CONFIGURATION FILES

Following are the optional configuration files. If present, it should be located in the etc dir

### **ovnnb-active.conf**

If present, this file should hold the url to connect to the active Northbound DB server

```
tcp:x.x.x.x:6641
```

### ovnsb-active.conf

If present, this file should hold the url to connect to the active Southbound DB server

**tcp:x.x.x.x:6642**

### ovn-northd-db-params.conf

If present, start\_northd will not start the DB server even if **--ovn-manage-ovsdb=yes**. This file should hold the database url parameters to be passed to ovn-northd.

**--ovnnb-db=tcp:x.x.x.x:6641 --ovnsb-db=tcp:x.x.x.x:6642**

### ic-nb-active.conf

If present, this file should hold the url to connect to the active Interconnection Northbound DB server

**tcp:x.x.x.x:6645**

### ic-sb-active.conf

If present, this file should hold the url to connect to the active Interconnection Southbound DB server

**tcp:x.x.x.x:6646**

### ovn-ic-db-params.conf

If present, this file should hold the database url parameters to be passed to ovn-ic.

**--ic-nb-db=tcp:x.x.x.x:6645 --ic-sb-db=tcp:x.x.x.x:6646**

## RUNNING OVN DB SERVERS WITHOUT DETACHING

**# ovn-ctl run\_nb\_ovsdb**

This command runs the OVN nb ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN nb ovsdb-server in a container.

**# ovn-ctl run\_sb\_ovsdb**

This command runs the OVN sb ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN sb ovsdb-server in a container.

**# ovn-ctl run\_ic\_nb\_ovsdb**

This command runs the OVN IC-NB ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN IC-NB ovsdb-server in a container.

**# ovn-ctl run\_ic\_sb\_ovsdb**

This command runs the OVN IC-SB ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN IC-SB ovsdb-server in a container.

## EXAMPLE USAGE

**Run ovn-controller on a host already running OVS**

**# ovn-ctl start\_controller**

**Run ovn-northd on a host already running OVS**

**# ovn-ctl start\_northd**

**All-in-one OVS+OVN for testing**

**# ovs-ctl start --system-id="random"**

**# ovn-ctl start\_northd**

**# ovn-ctl start\_controller**

**Promote and demote ovsdb servers**

**# ovn-ctl promote\_ovnnb**

**# ovn-ctl promote\_ovnsb**

**# ovn-ctl --db-nb-sync-from-addr=x.x.x.x --db-nb-sync-from-port=6641**

```
--db-nb-probe-interval-to-active=60000 demote_ovnnb
```

```
# ovn-ctl --db-sb-sync-from-addr=x.x.x.x --db-sb-sync-from-port=6642 --db-sb-probe-interval-to-active=60000 demote_ovnsb
```

### Creating a clustered db on 3 nodes with IPs x.x.x.x, y.y.y.y and z.z.z.z

*Starting OVN ovsdb servers and ovn-northd on the node with IP x.x.x.x*

```
# ovn-ctl --db-nb-addr=x.x.x.x --db-nb-create-insecure-remote=yes --db-sb-addr=x.x.x.x
--db-sb-create-insecure-remote=yes --db-nb-cluster-local-addr=x.x.x.x --db-sb-cluster-local-addr=x.x.x.x
--ovn-northd-nb-db=tcp:x.x.x.x:6641,tcp:y.y.y.y:6641,tcp:z.z.z.z:6641
--ovn-northd-sb-db=tcp:x.x.x.x:6642,tcp:y.y.y.y:6642,tcp:z.z.z.z:6642 start_northd
```

*Starting OVN ovsdb-servers and ovn-northd on the node with IP y.y.y.y and joining the cluster started at x.x.x.x*

```
# ovn-ctl --db-nb-addr=y.y.y.y --db-nb-create-insecure-remote=yes --db-sb-addr=y.y.y.y

### Passing ssl keys when starting OVN dbs will supercede the default ssl values in db

*Starting standalone ovn db server passing SSL certificates*

```
# ovn-ctl --ovn-nb-db-ssl-key=/etc/ovn/ovnnb-privkey.pem
