NAME

ovn-ctl - Open Virtual Network northbound daemon lifecycle utility

SYNOPSIS

ovn-ctl [options] command

DESCRIPTION

This program is intended to be invoked internally by Open Virtual Network startup scripts. System administrators should not normally invoke it directly.

COMMANDS

```

PROBE INTERVAL OPTIONS

- --db-nb-probe-interval-to-active=Time in milliseconds
- --db-sb-probe-interval-to-active=Time in milliseconds

CONFIGURATION FILES

Following are the optional configuration files. If present, it should be located in the etc dir

ovnnb-active.conf

If present, this file should hold the url to connect to the active Northbound DB server

tcp:x.x.x.x:6641

ovnsb-active.conf

If present, this file should hold the url to connect to the active Southbound DB server

tcp:x.x.x.x:6642

ovn-northd-db-params.conf

If present, start_northd will not start the DB server even if **--ovn-manage-ovsdb=yes**. This file should hold the database url parameters to be passed to ovn-northd.

--ovnnb-db=tcp:x.x.x.x:6641 --ovnsb-db=tcp:x.x.x.x:6642

ic-nb-active.conf

If present, this file should hold the url to connect to the active Interconnection Northbound DB server

tcp:x.x.x.x:6645

ic-sb-active.conf

If present, this file should hold the url to connect to the active Interconnection Southbound DB server

tcp:x.x.x.x:6646

ovn-ic-db-params.conf

If present, this file should hold the database url parameters to be passed to ovn-ic.

--ic-nb-db=tcp:x.x.x.x:6645 --ic-sb-db=tcp:x.x.x.x:6646

RUNNING OVN DB SERVERS WITHOUT DETACHING

ovn-ctl run_nb_ovsdb

This command runs the OVN nb ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN nb ovsdb-server in a container.

ovn-ctl run sb ovsdb

This command runs the OVN sb ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN sb ovsdb-server in a container.

ovn-ctl run_ic_nb_ovsdb

This command runs the OVN IC-NB ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN IC-NB ovsdb-server in a container.

ovn-ctl run_ic_sb_ovsdb

This command runs the OVN IC-SB ovsdb-server without passing the **detach** option, making it to block until ovsdb-server exits. This command will be useful for starting the OVN IC-SB ovsdb-server in a container.

EXAMPLE USAGE

```
Run ovn-controller on a host already running OVS
```

ovn-ctl start_controller

Run ovn-northd on a host already running OVS

ovn-ctl start_northd

All-in-one OVS+OVN for testing

ovs-ctl start --system-id="random"

ovn-ctl start_northd

ovn-ctl start_controller

Promote and demote ovsdb servers

ovn-ctl promote_ovnnb

ovn-ctl promote_ovnsb

ovn-ctl --db-nb-sync-from-addr=x.x.x.x --db-nb-sync-from-port=6641

```
--db-nb-probe-interval-to-active=60000 demote_ovnnb
```

 $\# \ ovn-ctl \ --db-sb-sync-from-addr=x.x.x.x \ --db-sb-sync-from-port=6642 \ --db-sb-probe-interval-to-active=60000 \ demote \ ovnsb$

Creating a clustered db on 3 nodes with IPs x.x.x.x, y.y.y.y and z.z.z.z

Starting OVN ovsdb servers and ovn-northd on the node with IP x.x.x.x

Starting OVN ovsdb-servers and ovn-northd on the node with IP y.y.y.y and joining the cluster started at x.x.x.x

Starting OVN ovsdb-servers and ovn-northd on the node with IP z.z.z.z and joining the cluster started at x.x.x.x
